

IS311 Web Development

Week 01 - Lecture 01

Dr. Abbas Malik
amaalik@psu.edu.sa

IS311 Web Development

- Lecturer: Dr. Abbas Malik
 - Email: amaalik@psu.edu.sa
 - Mobile: 053 186 4813 (**join Whatsapp Group**)
 - Office: Building 101, Floor 2, Room E364
- Phd in Computer Sceicne, University of Grenoble, France
- Languages: English, French, Punjabi, Urdu
- Research: Machine Learning, Artificial Intelligence
- Experties: Programming, Mobile Dev, Web Dev, Database, ...

IS311 Web Development Course

- **Classes:** Sunday, Monday, Tuesday, Wednesday at 11 AM & 1 PM
- **Marks distribution**

| | | |
|----------------|-----|---------------------|
| • Quiz | 5% | Week 5 Wed on Paper |
| • Assignments | | Released in Week 1 |
| • Assignment 1 | 2% | Submission: Week 6 |
| • Assignment 2 | 3% | Submission: Week 12 |
| • Project | 20% | Release Week 1 |
| • Major 1 | 10% | Week 7 Wed in Lab |
| • Major 2 | 15% | Week 14 Wed in Lab |
| • Attendance | 5% | |
| • Final Exam | 40% | 20-May-2026 |

75% attendance is compulsory to sit in the final exam.

IS311 Web Development Course

Project

- Agreement of Project and team (Week 4)
- Phase 1 - Wireframe prototyp (Week 7)
- Phase 2 - Webpage desing using HTML, CSS and Bootstrap (Week 10)
- Phase 3 - Table Creation (Week 11)
- Phase 4 - Database connection and query (Week 13)
- Phase 5 - Fully functional website submission (Week 14)
- Demo & Presentation (Week 15)

Course Syllabus

Introduction

HTML

CSS

Bootstrap

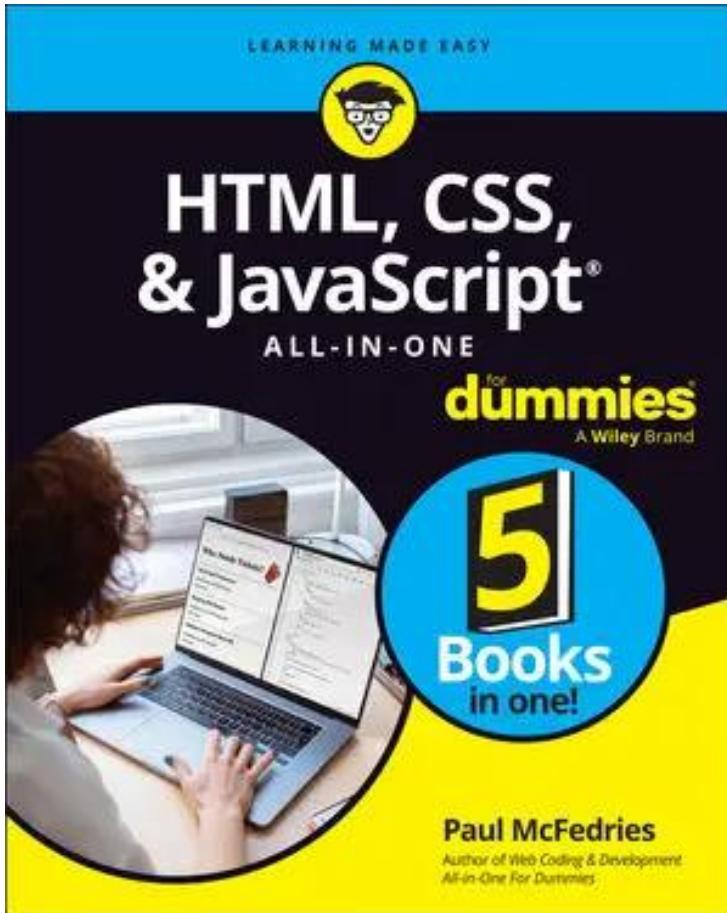

JavaScript

MySQL

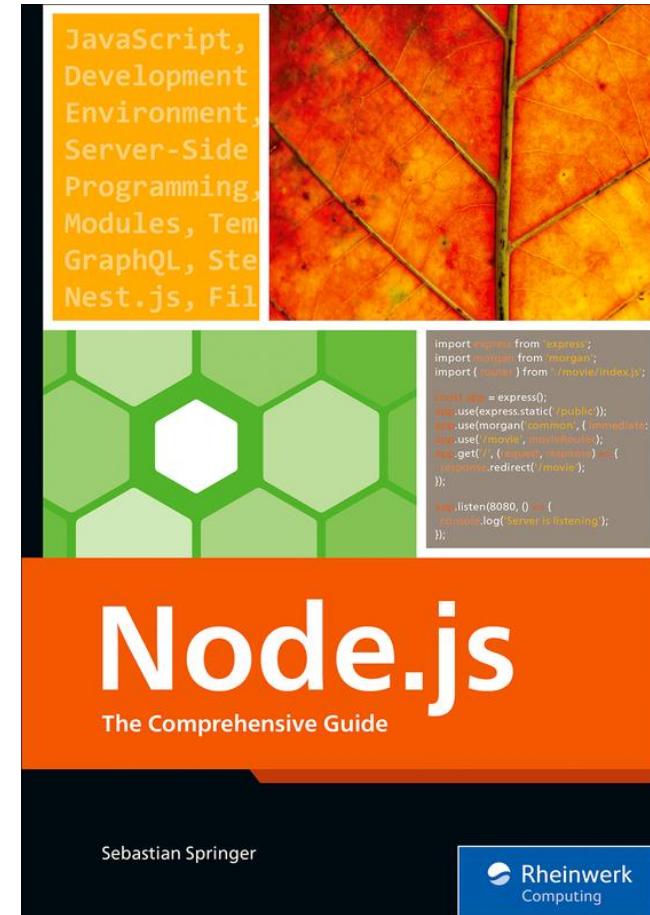

Node JS

Project

TIME TO START

What and Why is Internet?

- 1960: a way for government researchers to share information
 - Large computers with no mobility

What and Why is Internet?

- Cold War: ARPANET (Advanced Research Projects Agency Network)
- ARPANET → Evolved into what we now know as the Internet.
- **1st January 1983**: Official birth of **Internet**
 - Communication Protocol Transfer Control Protocol/Internetwork Protocol (TCP/IP)

Allowed different computers on different networks to "talk"

Histroy of WWW (World Wide Web)

Invented by Tim
Berners-Lee in
1989

CERN DD/OC

Tim Berners-Lee, CERN/DD

Information Management: A Proposal

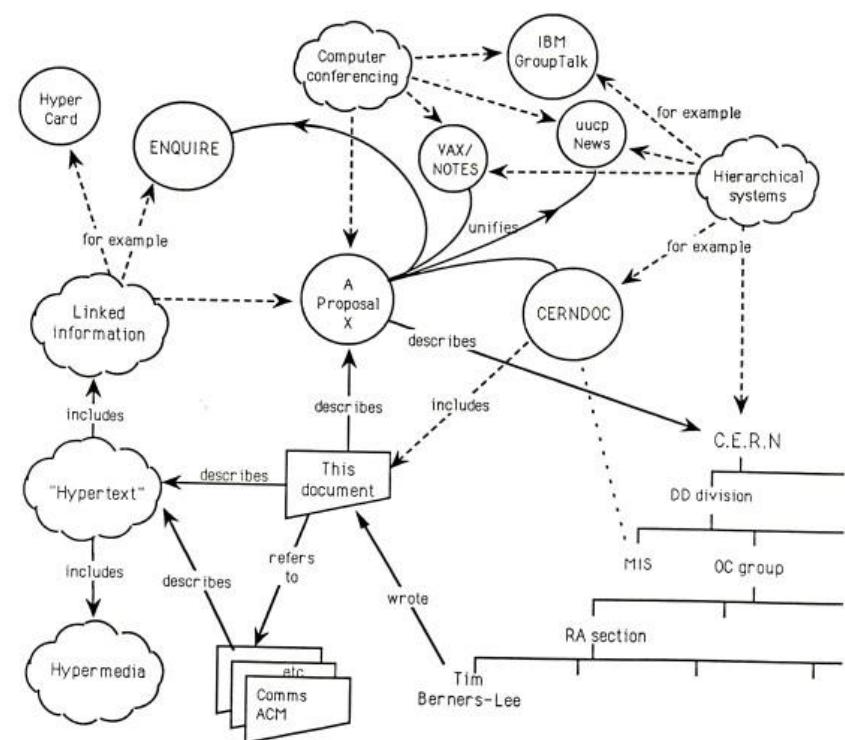

March 1989

Information Management: A Proposal

Abstract

This proposal concerns the management of general information about accelerators and experiments at CERN. It discusses the problems of loss of information about complex evolving systems and derives a solution based on a distributed hypertext system.

Keywords: Hypertext, Computer conferencing, Document retrieval, Information management, Project control

TIM - October 1990

Three Fundamental Technologies

- **HTTP - Hyper Text Transfer Protocol**
 - Allows for the retrieval of linked resources from across the web.
- **URI - Uniform Resource Identifier**
 - A unique address, used to identify each resource on the web. Commonly called a URL
- **HTML - HyperText Markup Language**
 - Markup/formatting language for the web

HTML - language of web

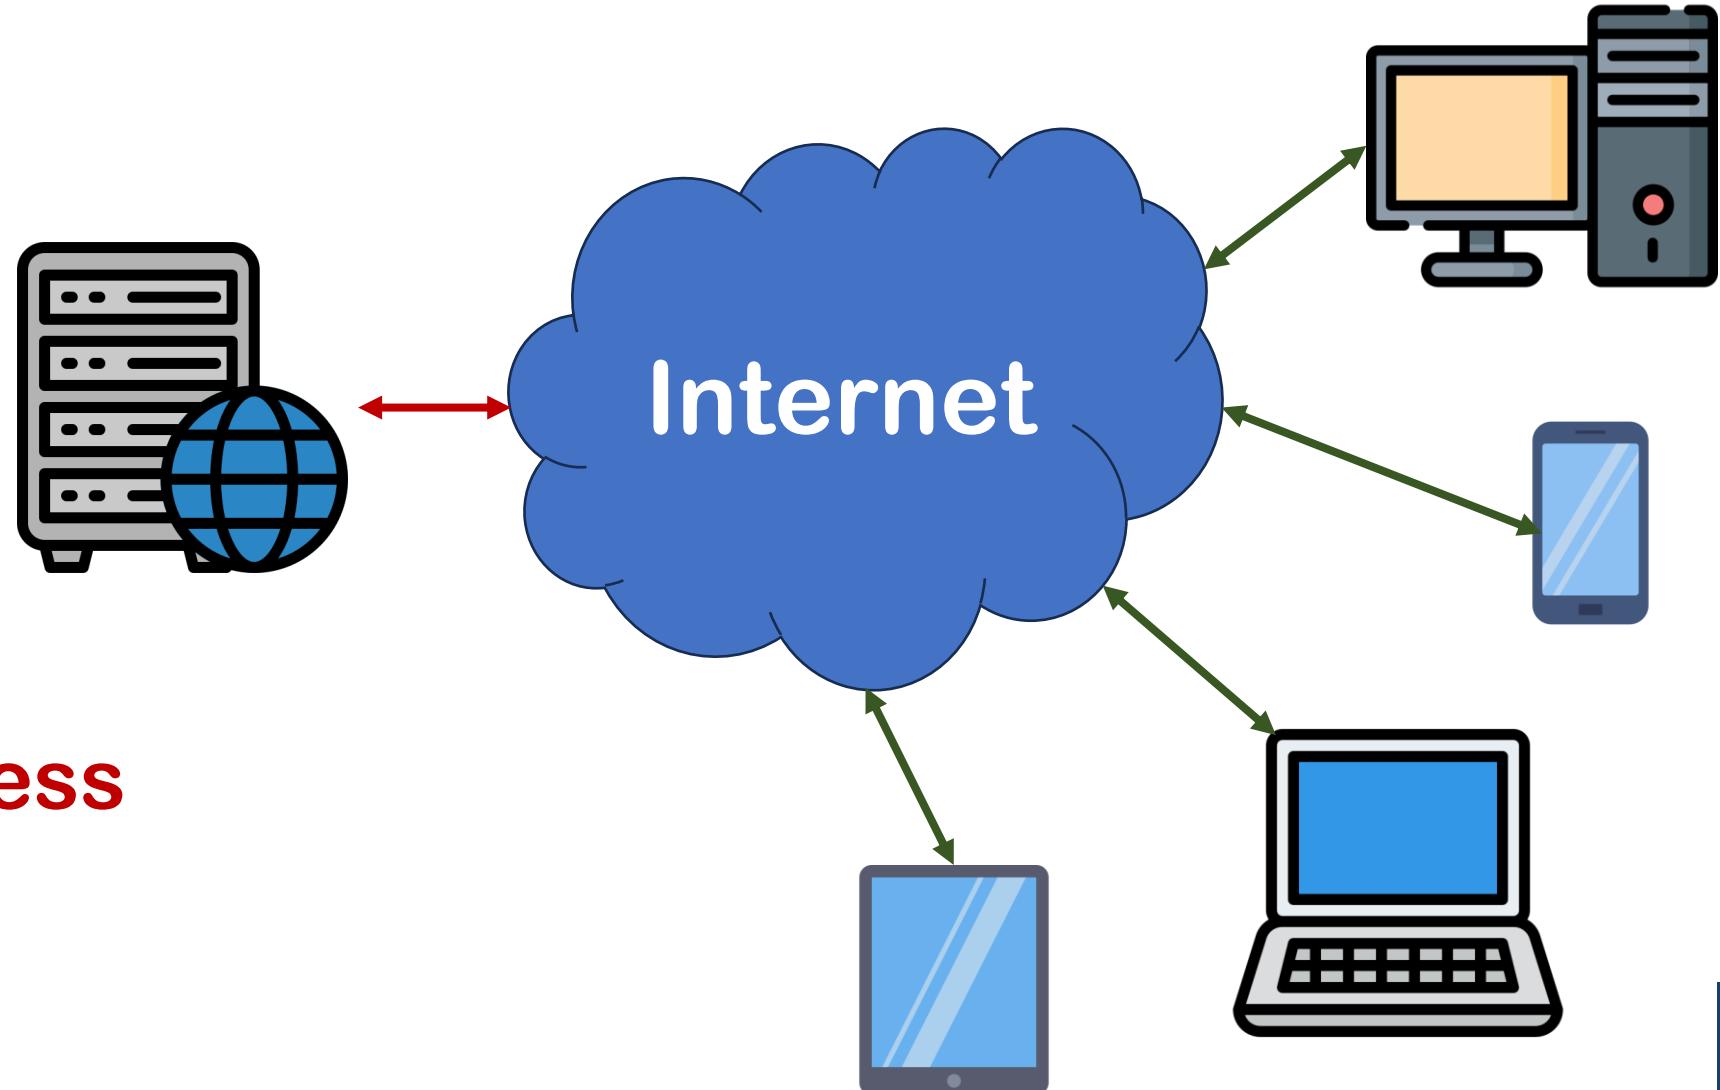

- HTML 1: 1990
- HTML 2 (Nov 1995) as RFC 1866
 - Form-based file upload (RFC 1867) Nov 1995
 - Tables (RFC 1942) May 1996
- HTML 3 (Jan 1997) - W3C Recommendation
- HTML 4 (Dec 1997-2000)
- HTML 5 (Oct 2014)

<https://www.w3.org/>

How it works

- Internet
- Client
- Server

IP Address

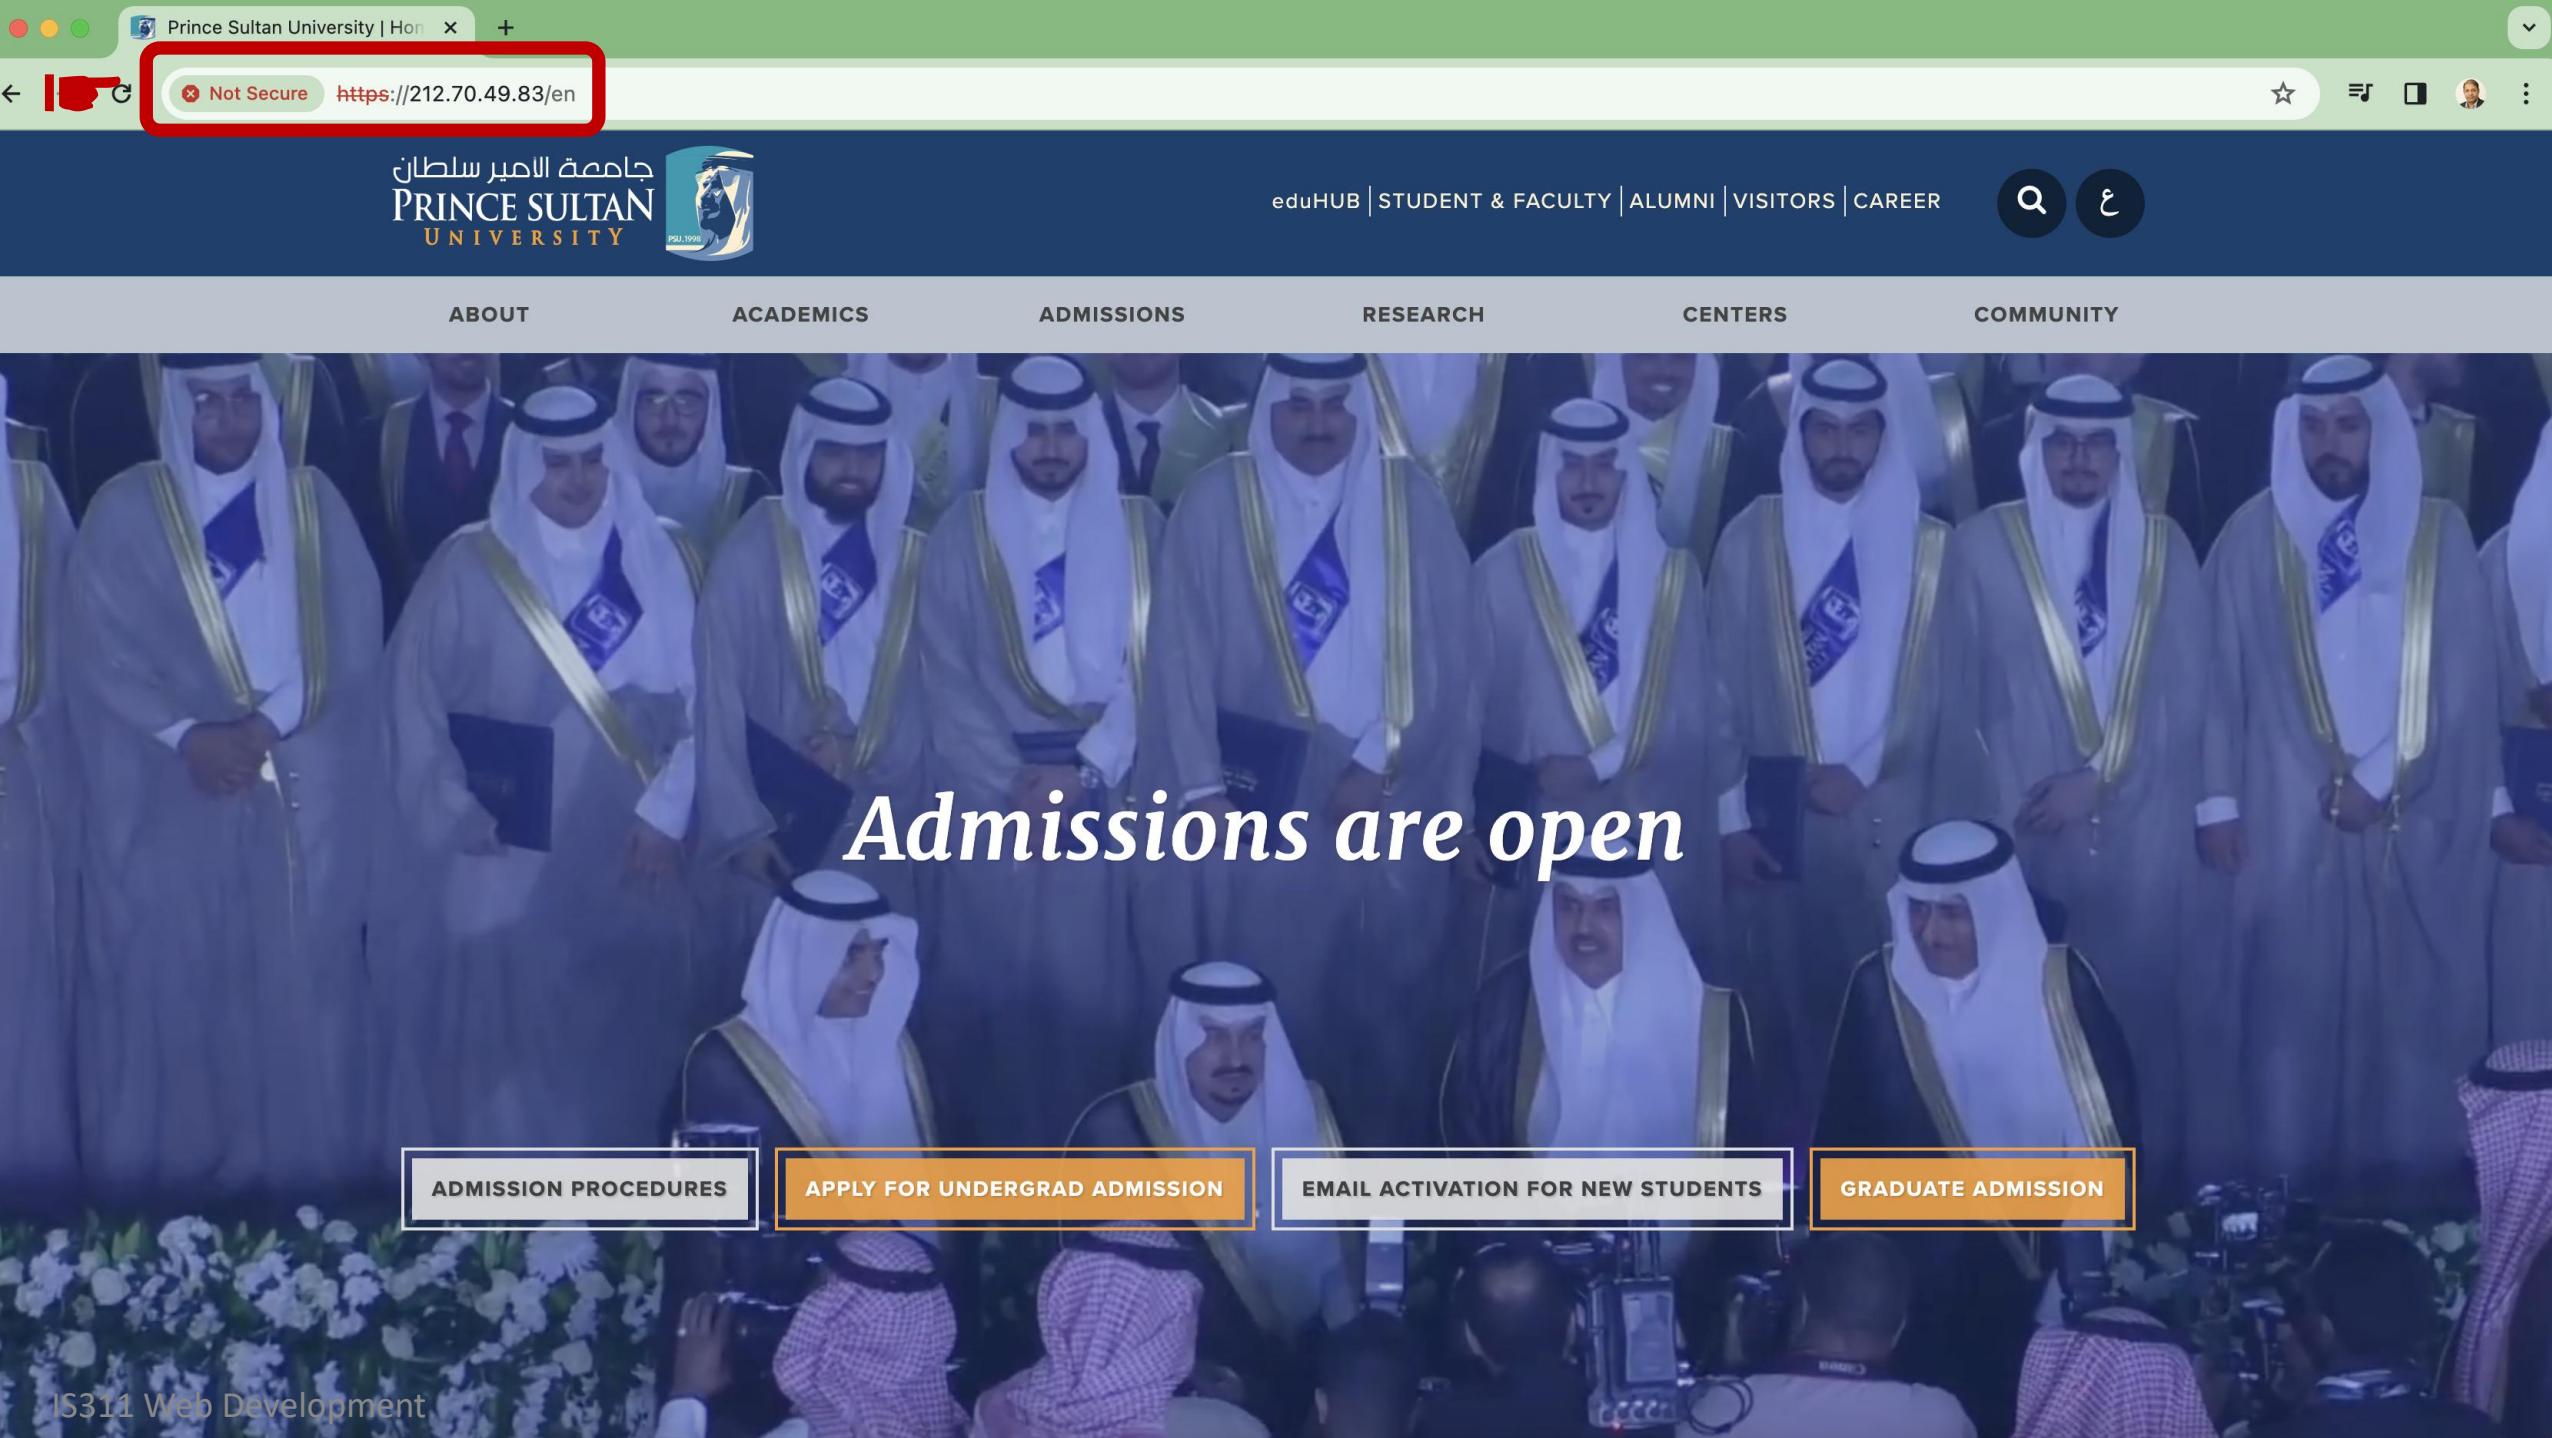

IP Address

<https://www.rankwatch.com/free-tools/domain-to-ip-converter-tool>

Enter the URL

Convert Domain to IP

| Domain | IP | Location |
|----------------|--------------|--------------|
| www.psu.edu.sa | 212.70.49.83 | Saudi Arabia |

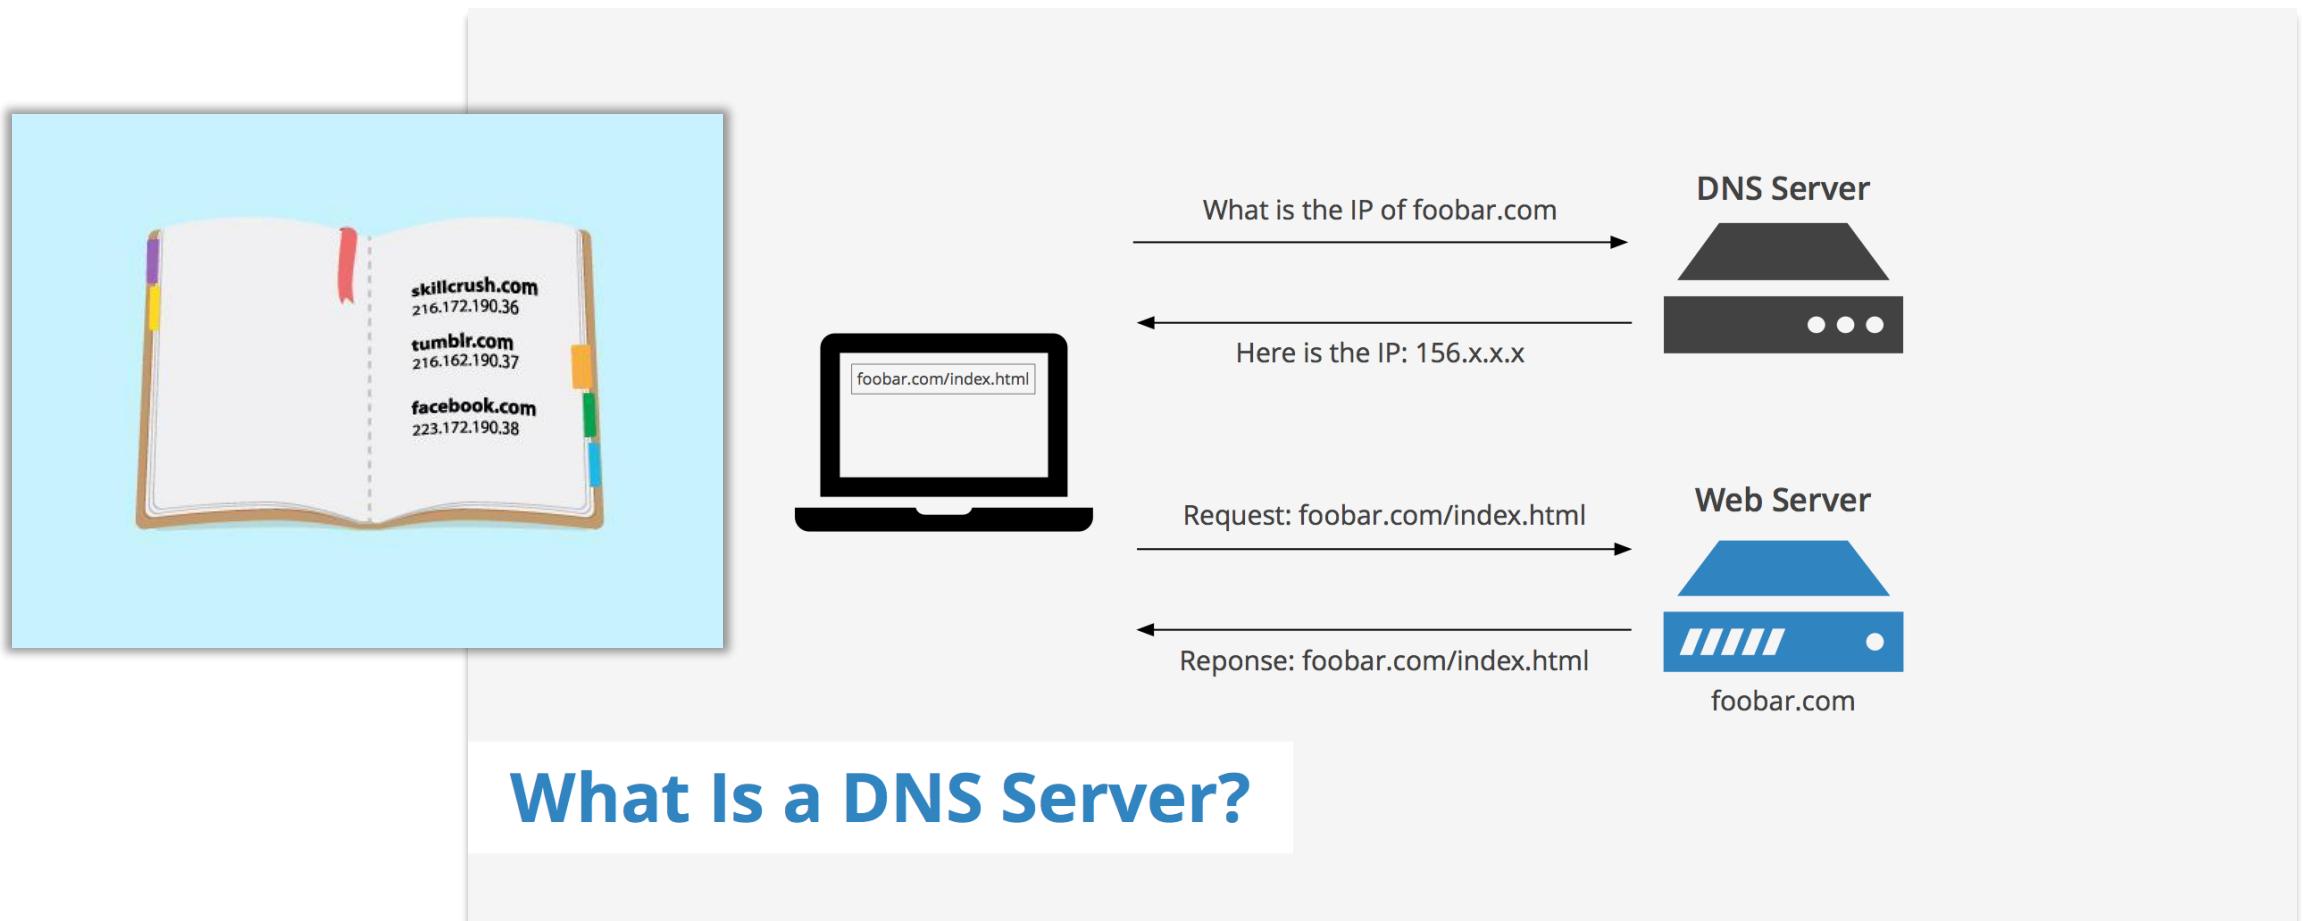

Admissions are open

[ADMISSION PROCEDURES](#)[APPLY FOR UNDERGRAD ADMISSION](#)[EMAIL ACTIVATION FOR NEW STUDENTS](#)[GRADUATE ADMISSION](#)

Domain Name Server (DNS)

Translate web address into IP address

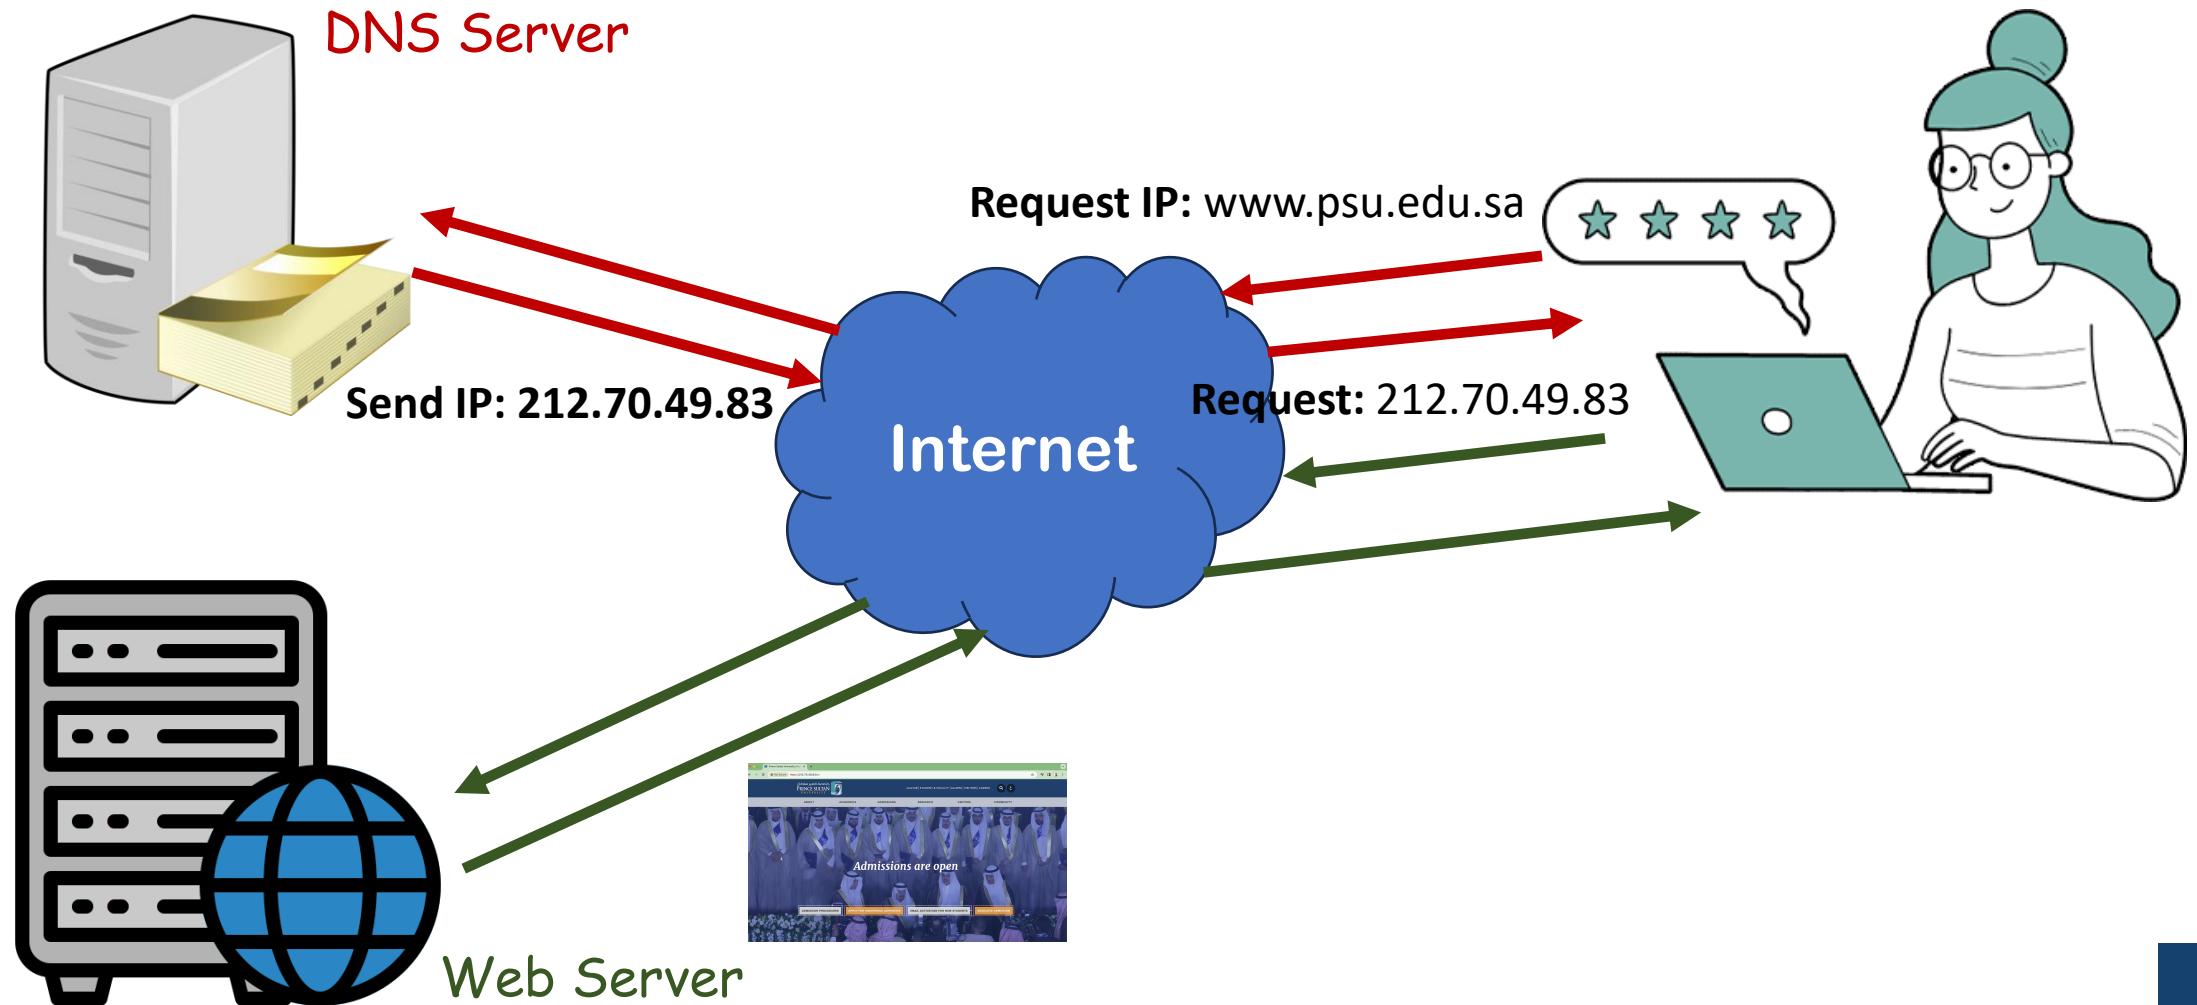

Domain Name Server (DNS)

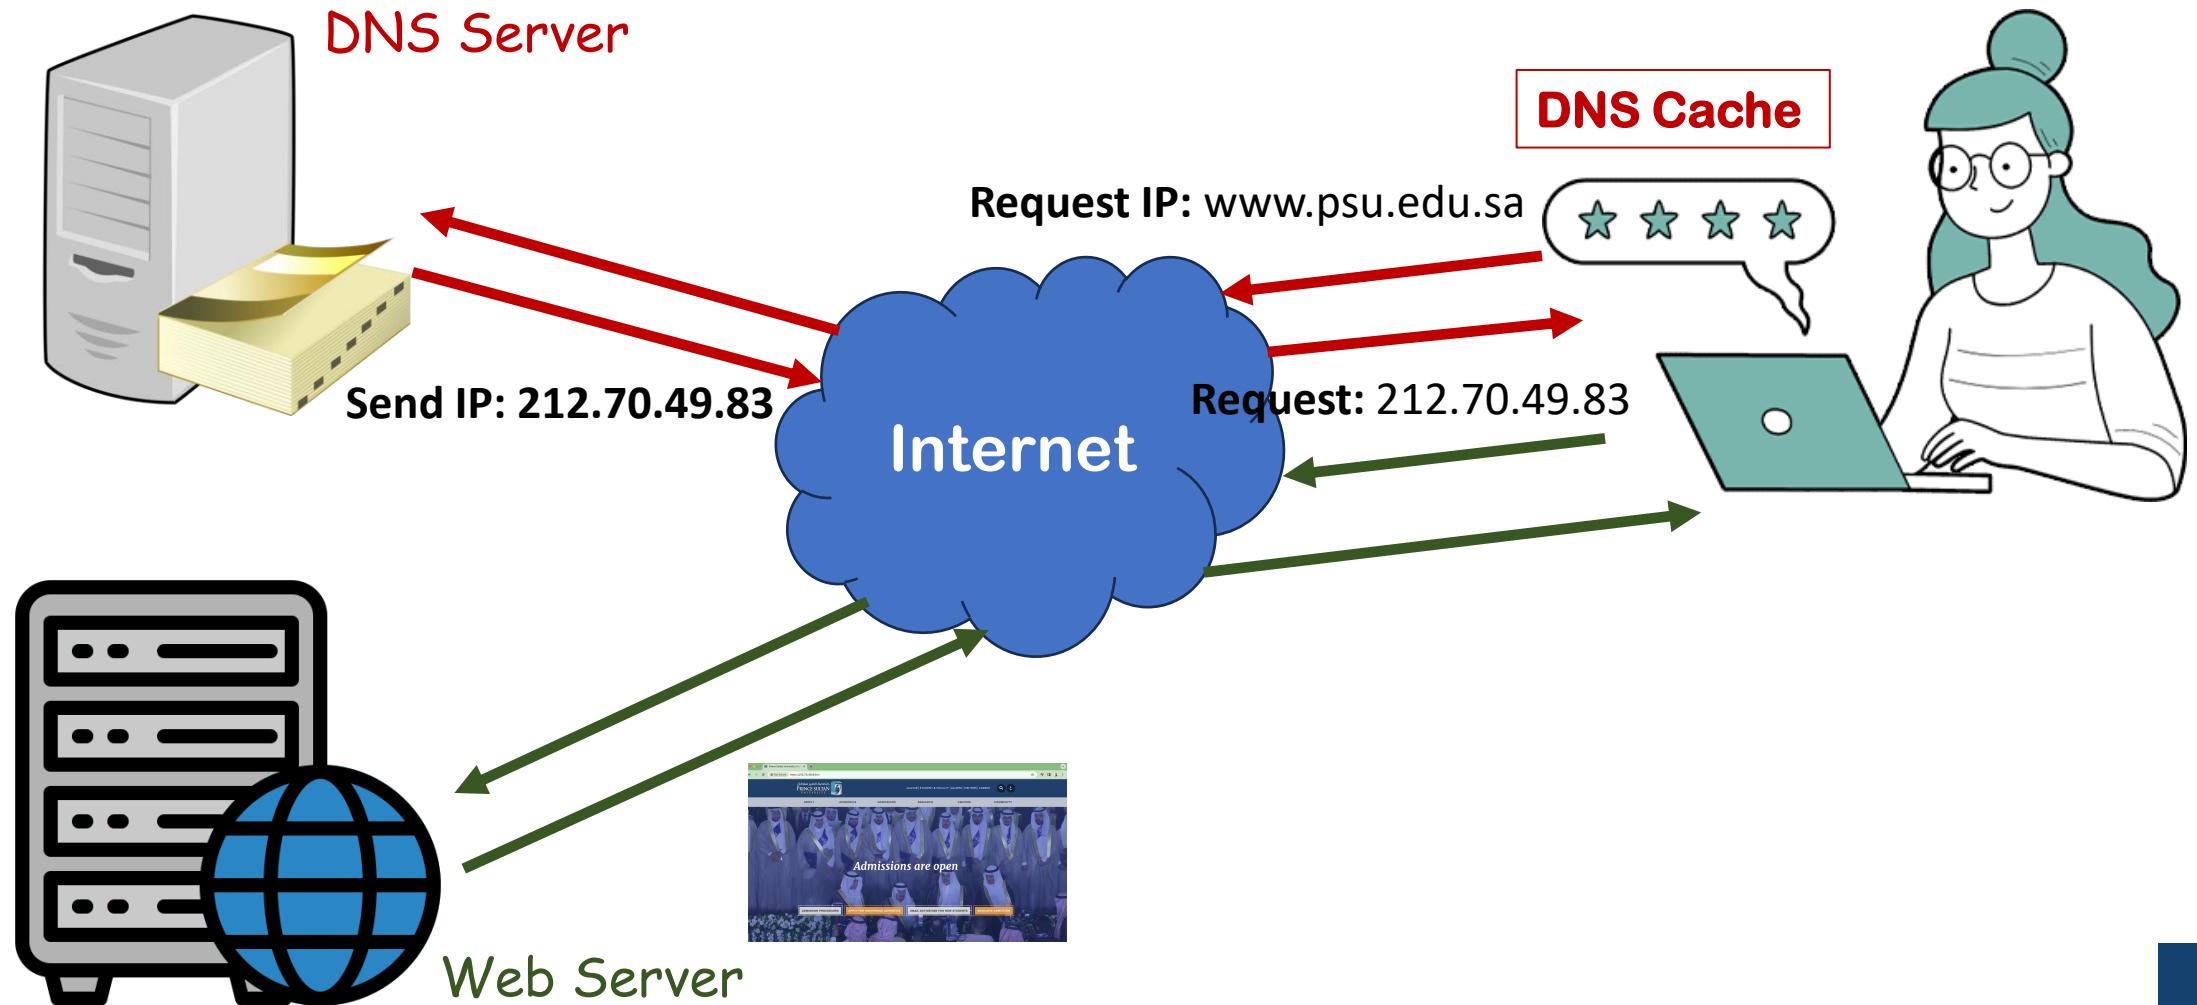

- **Domain Name** is a unique name for your website
- Maintains the relationship between IP addresses and domain names.
- Associates unique computer IP Addresses with the text-based domain names you type into a web browser

www.google.com Translated into  142.250.191.228

Client - Server Model

Client - Server Model

URL

- Uniform resource locator

<https://212.70.49.83/en/CCIS/is>

Domain Name

Folder on
Server

Sub Folder

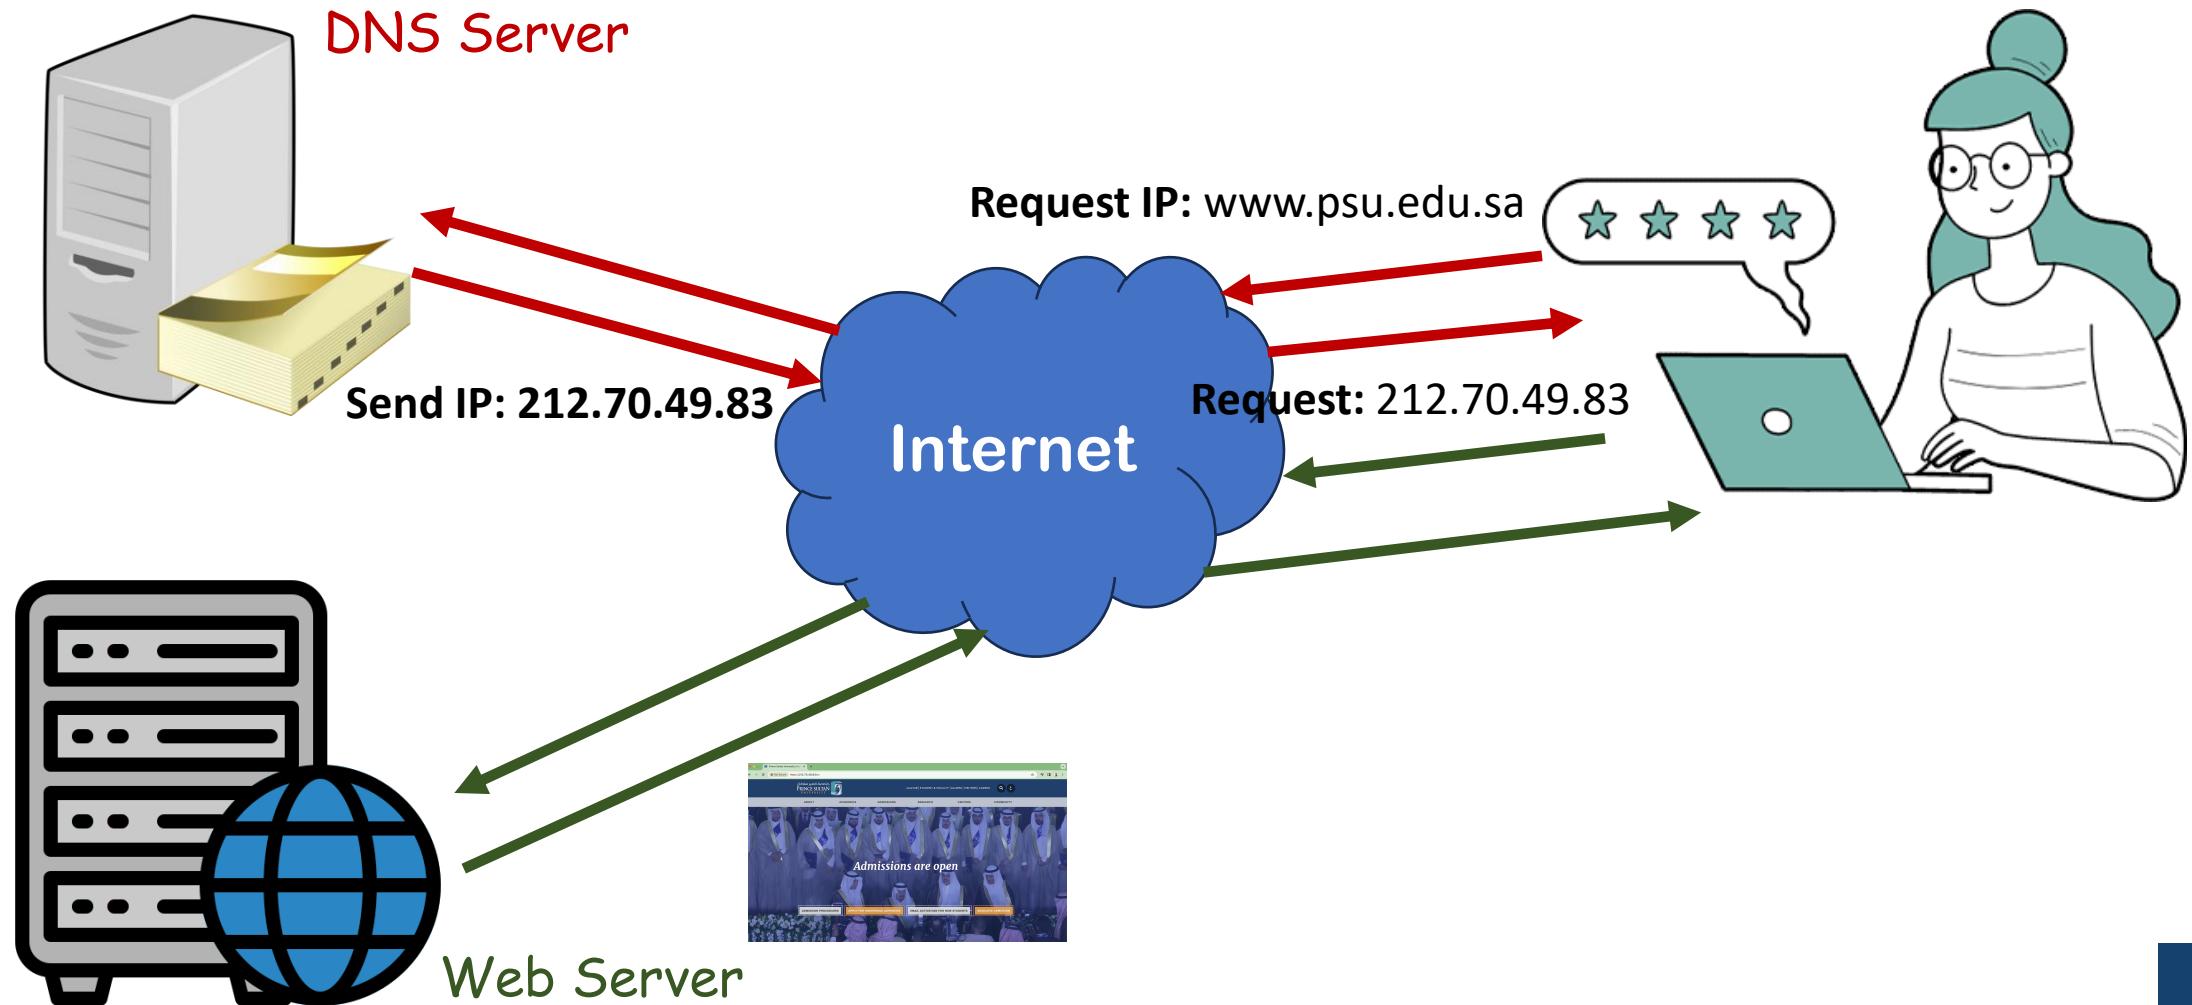

File
Resource

Protocols - Rules of Game

- **TCP** - transmission control protocol: a standard that defines how to establish and maintain a network conversation to exchange data
- **IP** - internet protocol: set of rules for routing and addressing
- **HTTP**: set of rules how hyper text is transferred over Internet

HTTP Request and Response

Email and File Protocol

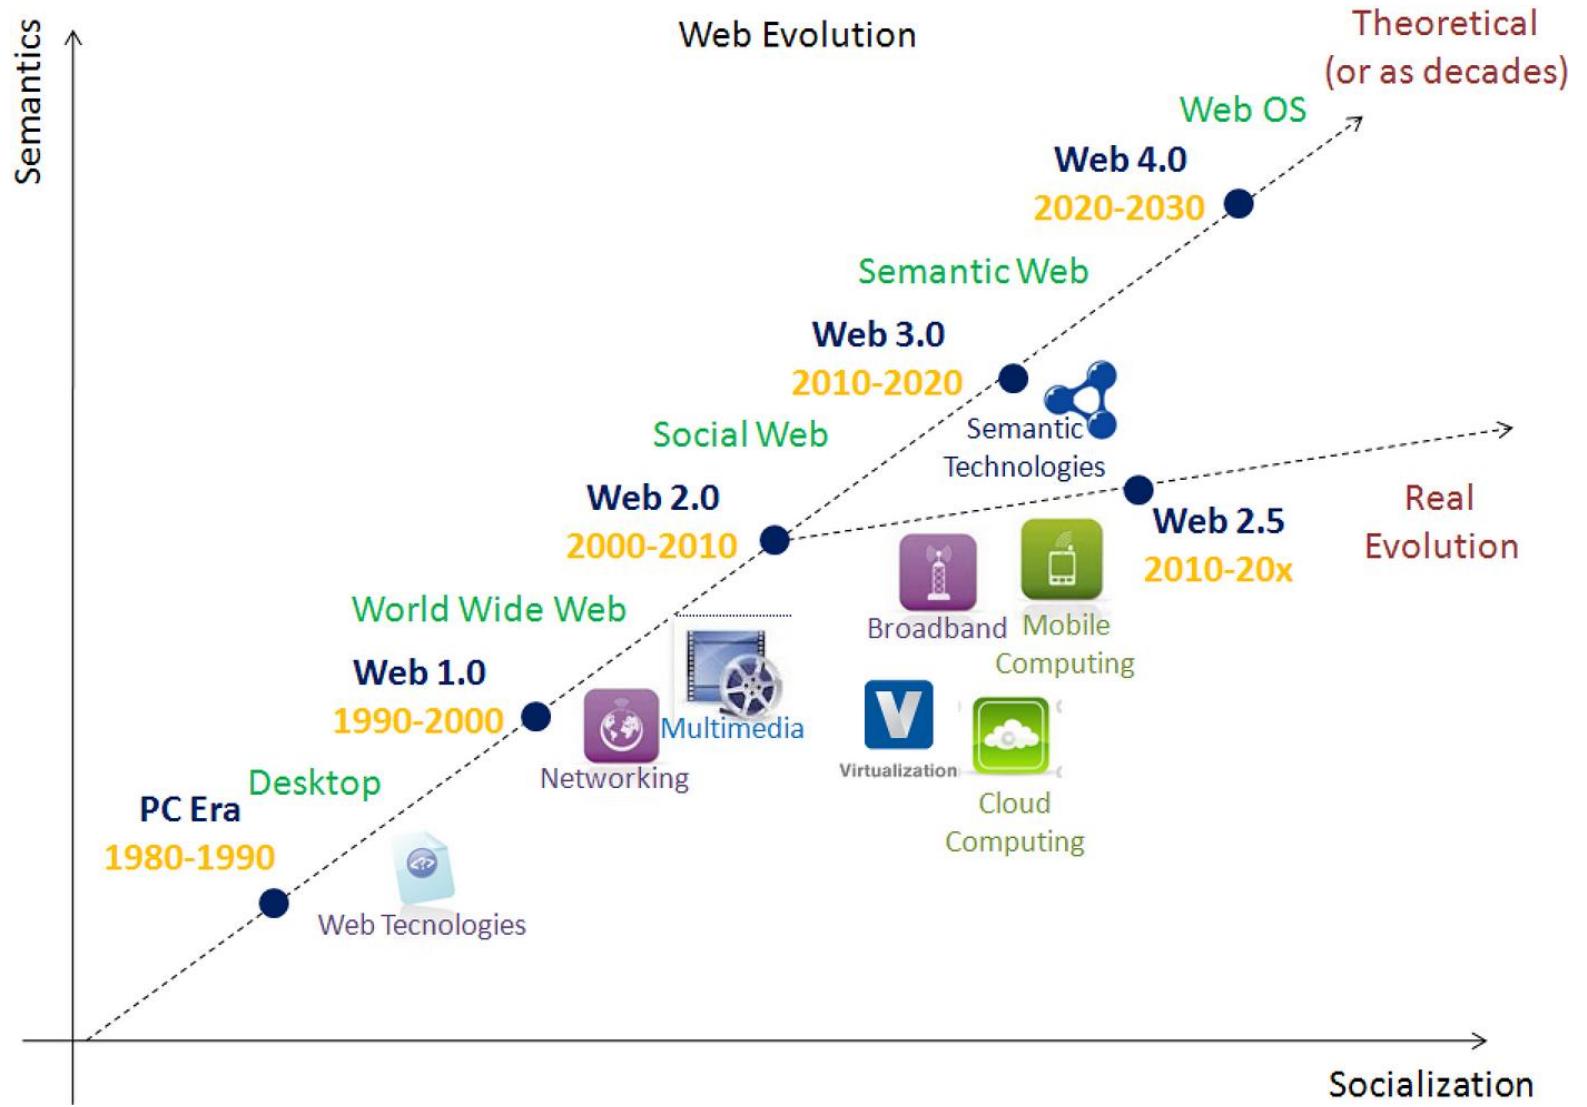

- SMTP - Simple Mail Transfer Protocol
- IMAP - Internet Mail Access Protocol
- POP (POP3) - Post Office Protocol
- FTP - File Transfer Protocol
 - Transfer files from one computer to another.
 - Helps to transfer whole website from developer computer to web server

Browser - Application

- A computer program to access websites and internet

Web Evolution

Three Tier Architecture

- **Presentation Tier**

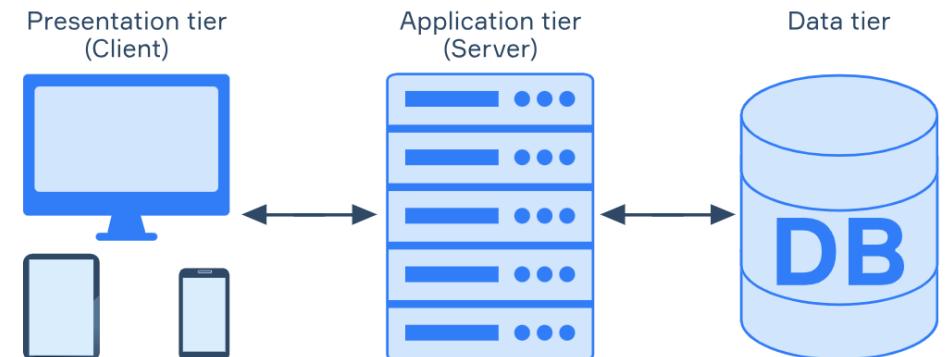

- user interface and communication layer

- **Application Tier**

- logic tier or middle tier, is the heart of the application

- **Data Tier**

- data access tier or back-end

Three Tier Architecture

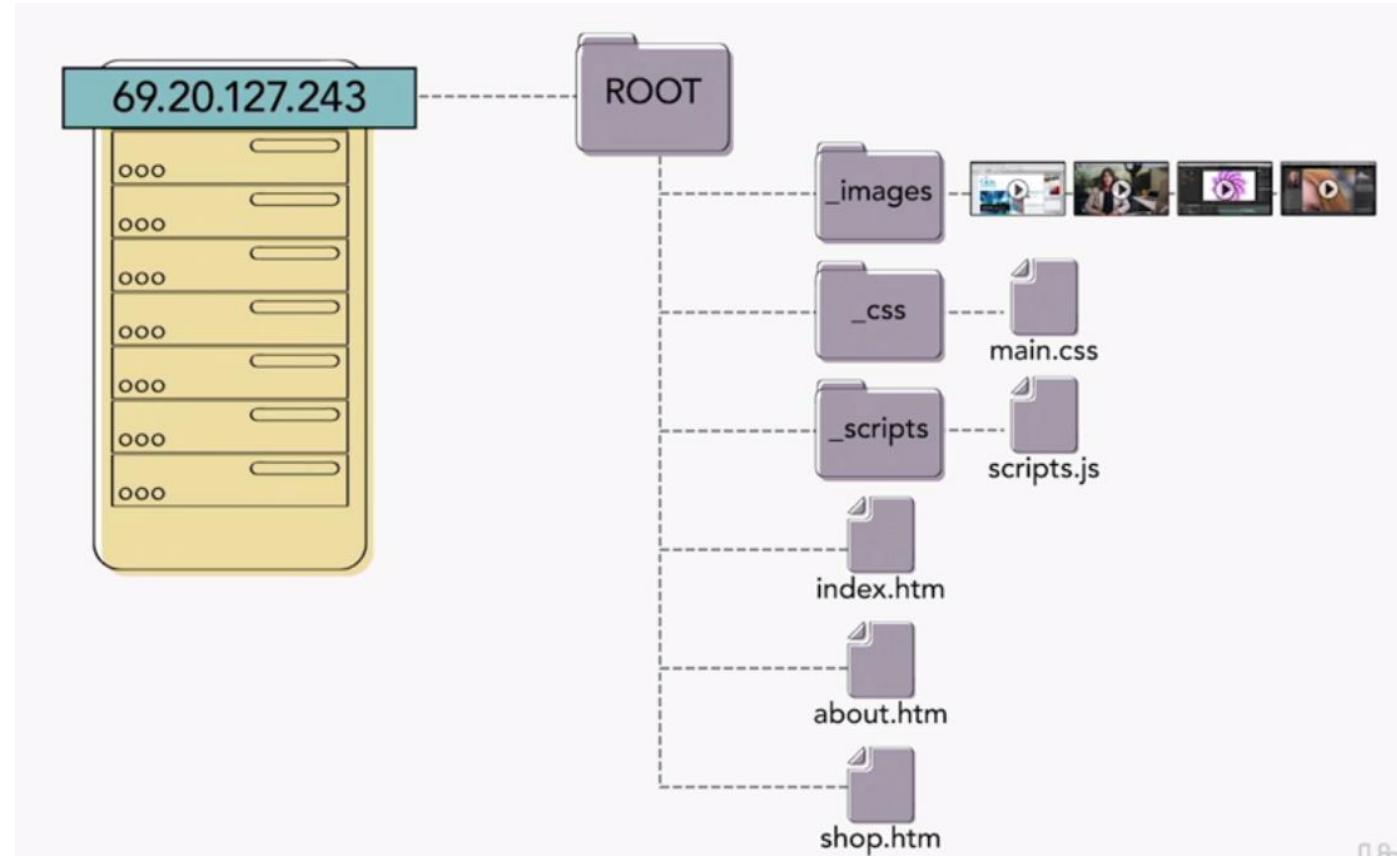

- Faster development
- Improved scalability
- Improved reliability
- Improved security

3-Tiers in Web Development

- **Web Server – Website**
 - Presentation tier
- **Application Server**
 - housing the business logic used to process user inputs
- **Database Server**
 - backend tier of a web application and provide data

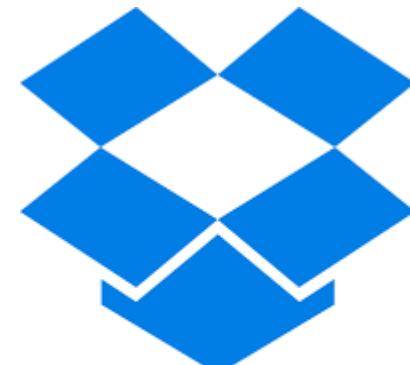

Web Server

A web server is a server that hosts websites and serves web pages.

Cloud & Mobile Computing

- New era of Internet, Web, and applications

Dropbox

Google Drive
